

World Population Map

Name: _____

Directions: Read Chapter 2 Key Issue 1. On the outline map, identify each of the 4 population-concentrations with a different colored pencil/ink. Provide a key at the bottom of the map indicating which color represents which region. Using lighter and darker shades of each color, shade the areas that are densely populated darker, and areas that are sparsely populated lighter.

On the back of this map:

- Make a bulleted list of key facts about each region.
- Define each of the three types of population density (arithmetic, physiological, and agricultural) using both your own words and some sort of graphic.
